

AndroidTablet

Take security control to new levels with the AndroidTablet and HomeControlHUB app

Provide unprecedented control over the Enforcer V11 security system, with the AndroidTablet and HomeControlHUB app.

Mounted or mobile around any residential or business property, the AndroidTablet allows users to not only surf the web, but open HomeControlHUB to action any keypad function. The interface combines the Enforcer V11, SmartPlug and cameras to control security, automation and video. Deliver a completely unified customer experience.

Your portable command centre

AndroidTablet

Your offering, your branding

It's not just a unified experience for the user, but you too. The interface pulls your branding from your PyronixCloud account to deliver a uniform and professional system throughout. There's even a quick share option for users to send your details to friends and family. Your branding, front and centre.

Making maintenance a dream

The AndroidTablet with HomeControlHUB isn't just a convenient interface for the user to take around their property, but also for you, as a portable keypad for your maintenance visits. Don't waste time referring back to a static keypad on the wall, pick up the AndroidTablet and walk around to quickly and efficiently check, diagnose and maintain the system. Maintenance is on the move.

See. Act.

The user can view up to 16 cameras through HomeControlHUB on the AndroidTablet. This delivers total awareness of the property, while fusing video and security into one platform simplifies the installation and provides a convenient, single user experience. Let users see what's happening and give them the power to act. Video and security in one.

Plug in to the potential

The introduction of the SmartPlug adds even greater upsell opportunities; entering the smart home market with value-added integration. Automate devices to activate at certain times, create scenes that activate at the touch of a button, or simply switch devices on and off. Embrace the potential.

Sound the alarm!

At the touch of the AndroidTablet's screen, HomeControlHUB lets the user activate the on-site loud, audible sirens that sound for 15 seconds to deter potential intruders. So, should the user see something suspicious through their cameras, they can proactively take direct action to stop any intruders in their tracks. Something wrong, activate the alarm. Something wrong, activate the alarm.

Please note: The AndroidTablet can only be used to control the security system when connected to the same Wi-Fi router. When connected to a different router, only automation and video functions can be controlled.

Partcode	ENF-TABLET
Basic Function	
CPU	ARM Cortex-A8
CPU max frequency	1300MHz
CPU cores	4
Memory	
System RAM	2GB
Total internal storage	16GB
Storage expansion	MicroSD* (32GB max)
Display	
Resolution	1280 x 800
